SB.11 Lockable Hinged Parking Post

The SB11 collapsible parking post is manufactured from high grade steel. The post is supplied complete with two keys for unlocking a press button device at the top of the post. The lock can be activated to lock the post without using the key in both the vertical or horizontal position. The key is for unlocking the post only (quantities of posts can be suited with the same key number at no extra cost). The lock fitted to the SB11 is also replaceable.

For optimum security, the SB11 post should be firmly fitted to a concrete base 300mm x 300mm to a depth of 100mm minimum. Alternatively it is also possible to bolt the base directly into an existing concrete or tarmac driveway using an epoxy fixing system providing that the material to be fixed into is of good sound condition with a minimum 100mm depth.
